

## We are looking for a Material Engineer

In this position you will be responsible for research, specification, documentation, testing and evaluation of materials, as well as diagnosing failures and erosion.

You are to:

- Plan and facilitate meetings with appropriate personnel to keep projects on time
- Create technical writing of documents
- Have a strong knowledge of material surface characteristics
- Have a detailed understanding of the practical application of materials
- Make selections of material combinations for specific purposes
- Understand environmental limitations for materials and their processing
- Process climate and its contribution to the resulting product performance
- Work with workshop technicians, share knowledge and ensure technical support.

A bachelor's degree in material engineering, related technical discipline, or equivalent experience is required.

You have 1-3 years of experience, a strong technical aptitude, and detailed understanding of polymers and composite materials.
